Cardiff, United Kingdom | 07741020068 | sabarigirish28nov@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio Website](#)

PROFESSIONAL SUMMARY

Application Engineering Analyst with 1.5 years of enterprise consulting, risk management, ticket management, incident response experience and analysing complex datasets for a global telecommunications project at Accenture, and an MSc from Cardiff University, graduating with Distinction. Highly proficient in modern web development techniques, with a strong foundation in Python, Cloud Infrastructure (AWS), designing playbooks and AI integrations. Combines a security-first mindset with a high bar for compliance, efficiency and punctuality.

TECHNICAL SKILLS

- **AI, Data & Automation**: MS Excel, R, MATLAB, Matplotlib, Plotly, Seaborn, OpenCV, NumPy, Pandas, Scikit-Learn, NLTK, ELK Stack
- **Governance & Risk**: ISO27001 concepts, NIST framework, Incident Response Procedures, GDPR Awareness, Technical Writing, Risk Management, Security Sanity Checks, Disaster Recovery (RTO/RPO targets)
- **Incident Frameworks**: MITRE ATT&CK, MITRE CAPEC, Cyber Kill Chain, Incident Response Life Cycle, STRIDE, Cyber Chain of Custody
- **Malware and Log Analysis**: ELK Tool, Ghidra, YARA, Linux, Wireshark, PE File Analysis, Windows Registry Structures
- **Penetration Testing**: Nmap, Metasploit, SQLmap, Hydra, JohnTheRipper
- **Digital Forensic Tools**: Autopsy, FTK Imager, tcpdump, Volatility, ExifTool, Steghide
- **Networking**: TCP/IP, OSI Model, Firewalls, Subnetting, DNS, HTTP/S
- **Cloud and Infrastructure**: AWS Fundamentals, Docker, Git/GitHub, CI/CD principles, Secure Coding (SDL)
- **Frontend Programming Languages and Frameworks**: HTML/CSS, Jinja2, JavaScript, React.js
- **Backend Programming Languages and Frameworks**: Python, Java, C, C++, SQL, PHP, Flask, KQL

EXPERIENCE

Advanced Application Engineering Analyst | Accenture

Chennai, India

July 2022 – January 2024

- Utilised the ELK Stack and SQL to query and correlate large log datasets, identifying anomalous network traffic patterns, anomalous work order behaviour and potential indicators of compromise (IoCs).
- Engineered Python automation scripts to streamline log analysis, reducing manual investigation time by 50% and eliminating human error in repetitive checks.
- Partnered with cross-functional order fallout and security teams of over 30 members to verify and validate smooth execution of BAU activities.
- Leveraged data analysis to recommend and implement system performance improvements for a 15-year global telecommunications project.
- Conducted initial triage and resolution for 40+ monthly security incidents and abnormality, assessing severity to initiate appropriate escalation procedures.
- Documented incident patterns, incident response playbooks, resolution steps and Standard Operating Procedures (SOPs), easing knowledge transfer and decreasing onboarding time for new team members by 50%, ensuring adherence to global security policies.
- Facilitated quarterly disaster recovery drills, verifying 30+ system backups and achieving full data recovery within defined RTO/RPO targets.
- Collaborated with business stakeholders to categorise and prioritise incidents and potential risks thereby reducing incident backlogs by 25% and minimising client's service downtime.
- Performed consistent sanity checks and security assessments on client infrastructure, verifying system adherence to 4 major data protection frameworks to ensure security-by-design.
- Trained and mentored 3 junior analysts, enabling faster onboarding and consistent adherence to best practices.
- Improved component performance with detailed analysis, improving new work order outflow by 40%.
- Discovered issues and closed legacy work orders, improving legacy work order outflow by 30%.
- Analysed abnormal work order behaviour with teams to identify root causes, cutting incident recurrence rates by 30%.

EDUCATION

Master of Science (M.S.) - Cyber Security | Cardiff University (Russell Group)

Cardiff, UK

September 2024 - December 2025

- Graduated with **Distinction**
- Obtained Scholarship - Vice-Chancellor's International Scholarship
- Scored **High Distinction** (> 80%) in MSc Dissertation, Business Continuity and Transformation, and Cybersecurity Operations
- Scored **Distinction** (> 70%) in Cybersecurity and Risk Management, Computer and Network Forensics, and Developing Secure Systems and Applications
- Scored **Merit** (> 60%) in Penetration Testing and Malware Analysis
- Performed advanced malware analysis and reverse engineering on PE files using Ghidra, YARA, and Wireshark
- Conducted digital forensics and incident response (DFIR) labs, utilising Volatility, Exiftool, Autopsy and FTK Imager to analyse memory dumps and Windows registry structures
- Guided new students around campus during the orientation week and helped them locate key facilities and events

Bachelor of Technology (B.Tech.) - Computer Science | Vellore Institute of Technology

Chennai, India

July 2018 - August 2022

- Graduated with **8.64 CGPA** (First Class Equivalent)
- Member of the Debate Society
- Gained understanding of buffer overflows and secure coding in C/C++

PROJECTS

- **Wards and Firewalls:** Designed and developed a card-based, D&D-style game that gamifies Cyber Security Awareness training for non-technical audiences; earned positive reviews from the Cyber Innovation Hub and DTIL, and increased cybersecurity awareness among novice users by 92.5%.
- **FlagQuest V:** Developed a mini-CTF (Capture The Flag) web platform, implementing diverse security challenges (e.g., SQLI, XSS) to demonstrate practical offensive security skills.
- **CyberSim Flashcards:** Engineered a gamified security training tool with a custom simulation engine that mocks backend vulnerabilities like SQL Injection and IDOR directly in the browser.
- **PatientOS:** Built a healthcare web app at NHS Hack Day 2026 enabling patients to upload blood tests and prescriptions for plain-language explanations and OTC drug interaction checks for chronic conditions.
- **Threat Intelligence Dashboard:** Developed a Threat Intelligence Dashboard (Python/Flask, JS) integrating AbuseIPDB and VirusTotal APIs for IP/hash checks and an RSS news feed.
- **Smart Image Repost Detection:** Prototyped image skewing transformations in MATLAB before engineering a final Python algorithm using OpenCV and Matplotlib. Leveraged pattern matching and visual similarity analysis to classify edited image reposts with 90% accuracy.

CERTIFICATIONS

- SecureFlag OWASP Top 10:2021 in Python with Django
- Google Cybersecurity Certificate
- Cisco Cybersecurity Operations Fundamentals Certificate
- The Complete Cyber Security Course (Parts 1 to 4) [Udemy course by StationX]
- 100 Days of Code: The Complete Python Pro Bootcamp [Udemy course by The App Brewery]
- The Complete Full-Stack Web Development Bootcamp [Udemy course by The App Brewery]
- Pre-Security by TryHackMe
- Cyber Security 101 by TryHackMe
